Hunter Region Checklist

This booklet summarises the current status in the Hunter Region of NSW of every bird species ever recorded by the Hunter Bird Observers Club Inc. (HBOC). A map of the Hunter Region is at the back of the booklet. Comments about status of species are based on data in HBOC's Annual Bird Reports which span 1993-2012 (copies of the Bird Reports are available for purchase).

Where birds are indicated to be breeding locally, this means there has been a confirmed breeding record within the preceding 10 years. ID numbers are the unique species identifiers as used by Birdlife Australia.

Records are vetted by HBOC's Records Appraisal Committee which uses the categories below:

Category 1: All records for the species generally are accepted.

Category 2: Records usually are accepted, but supporting information may be required in the event of unusual numbers, location or season.

Category 3: The species is considered to be of special interest in relation to the Region, and supporting information is required before any record can be accepted for inclusion into the Report.

Please send bird records for the Hunter Region to the HBOC Records Officer at PO Box 24 New Lambton NSW 2305 (or submit them electronically at www.hboc.org.au). HBOC is especially interested to receive reports for all NSW Vulnerable or Endangered species, all breeding records for species, and all records of Category 2 and Category 3 species from within the Hunter Region. Observers should take field notes and/or photographs for any Category 2 and Category 3 birds they find.
